

CLAIMS:

What is claimed is:

1. An baby bottle holder comprising:
at lest one protruding side,
a top portion coupled to a center portion, said center portion having at least one viewing portion,
a lower portion including a through hole,
a base portion removably coupled to said lower portion,
wherein said baby bottle holder adapted to hold a baby bottle.
2. The baby bottle holder of claim 1, said top portion having a conical shape.
3. The baby bottle holder of claim 2, said base portion having a plurality of protruding stems, said protruding stems adapted to press a baby bottle against said top portion to provide a snug fit against said top portion.
4. The baby bottle holder of claim 1, said base portion having a horn shape to prevent tipping of said baby bottle holder.
5. The baby bottle holder of claim 1, said at least one protruding side having a plurality of interconnected keys.
6. The baby bottle holder of claim 1, further including another protruding side having a plurality of keys each molded with teething material.
7. The baby bottle holder of claim 1, further including a sound chip, a power source, a speaker, at least one switch and a sound controller.
8. The baby bottle holder of claim 1, wherein said baby bottle holder is shaped like one of a clarinet, a bugle a saxophone, and a rocket ship.
9. The baby bottle holder of claim 1, further including a power source, a light source and at least one switch to enable said light source to light.

10. The baby bottle holder of claim 9 further including a light source controller.
11. The baby bottle holder of claim 7, further including a power source, a light source and at least one switch to enable said light source to light.
12. The baby bottle holder of claim 11 further including a light source controller.
13. A baby bottle holder system comprising:
 - a baby bottle removably coupled to a baby bottle holder, said baby bottle including a bottle portion, a cap portion including a nipple, and a cap lid, said baby bottle holder comprising:
 - at least one protruding side,
 - a top portion coupled to a center portion, said center portion having at least one viewing portion,
 - a lower portion including a through hole,
 - a base portion removably coupled to said lower portion,
 - wherein said baby bottle holder adapted to hold the baby bottle, and said baby bottle engages the top portion of the baby bottle holder to prevent said baby bottle from exiting said baby bottle holder.
14. The baby bottle holder system of claim 13, said top portion having a conical shape.
15. The baby bottle holder system of claim 14, said base portion having a plurality of protruding stems, said protruding stems adapted to press the baby bottle against said top portion to provide a snug fit against said top portion.
16. The baby bottle holder system of claim 13, said base portion having a horn shape to prevent tipping of said baby bottle holder.
17. The baby bottle holder system of claim 13, said at least one protruding side having a plurality of interconnected keys.
18. The baby bottle holder system of claim 13, further including another protruding side having a plurality of keys each molded with teething material.

19. The baby bottle holder system of claim 13, further including a sound chip, a power source, a speaker, a sound controller and at least one switch to enable said sound chip to emit sound through said speaker.
20. The baby bottle holder system of claim 13, wherein said baby bottle holder is shaped like one of a clarinet, a bugle, a saxophone and a rocket ship.
21. The baby bottle holder of claim 13, further including a power source, a light source and at least one switch to enable said light source to light.
22. The baby bottle holder of claim 21, further including a light source controller.
23. The baby bottle holder of claim 19, further including a power source, a light source and at least one switch to enable said light source to light.
24. The baby bottle holder of claim 23, further including a light source controller.
